

METHOD AND COMPOSITION
FOR TREATMENT OF SKELETAL DYSPLASIAS

ABSTRACT

5 The present invention discloses pharmaceutical compositions for the treatment of skeletal dysplasias, comprising as an active ingredient at least one natriuretic peptide. Unexpectedly, it has been shown that the natriuretic factors may be effective for bone elongation in situations of abnormal bone growth especially for achondroplasia. The effects of the natriuretic peptide may be further enhanced by prolonging its residence time or action at the target site.
